"What we would really like is some measure of the degree of planarity of a network, a measure the could tell us, for example, that the road network of a country is 99% planar..." [Newman, 2010]

- Again, select at random from *F*, the set of all faces.
- Weight the selection by area, i.e.

$$\pi_i = \frac{a_i}{\sum\limits_{j \in F} a_j}$$

• Place a node u.a.r. in the face and connect it to the vertices.

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

Alternatively, you could just,

- pick, u.a.r., a location on the triangle
- · Connect it to the vertices of the face containing the location

In other words, Planar Growth with m = 3.

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

Alternatively, you could just,

- pick, u.a.r., a location on the triangle
- · Connect it to the vertices of the face containing the location

In other words, Planar Growth with m = 3.

Figure : Degree distribution of a network of order $N = 5 \times 10^5$ grown using Apollonian Planar Growth. Estimated power law exponent is $\alpha = 2.77$.

Variable area weight

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

Add an exponent to the area weighting formula:

$$\pi_i = \frac{a_i^\beta}{\sum\limits_{j \in F} a_j^\beta}$$

For $0 < \beta \ll 1$ triangle selection is roughly uniform. For $1 \ll \beta < \infty$ the largest triangle is preferred.

Variable area weight

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

Table : Estimated exponent of degree distribution for varying area weighting exponent.

β	α
10 ⁻³	2.93
10 ⁰	2.73
∞	2.76

 α - exponent of the degree distribution.

 β - area weighting exponent.

Variable area weight

Apollonian Planar Growth with Trisection

Variable area weight, $\beta < 1$

Figure : Degree distribution of networks of order $N = 10^5$ grown using Apollonian Planar Growth with β equal to $10^{-0.5}$, blue; 10^{-1} , pink; $10^{-1.5}$, olive and 10^{-2} , purple.

▲□▶ ▲□▶ ▲目▶ ▲目▶ ▲目 ● ● ●

Variable area weight, $\beta > 1$

Figure : Degree distribution of a network of order $N = 10^5$ grown using Apollonian Planar Growth with $\beta = 100$. Points in red are the degree distribution of an Apollonian network of the same size.

Variable area weight, $\beta = \infty$

Figure : Degree distribution of a network of order N = 265720 grown using Apollonian Planar Growth with $\beta = \infty$. Points in red are the degree distribution of an Apollonian network of the same size.

Summary

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ - 三 - のへぐ

- Power law degree distribution simply by maintaining planarity.
- Nodes distributed uniformly in space.
- Generalisation of existing Apollonian networks.
